

SIDDHARTH KHODKE

9881308580 · siddharthkhodke@gmail.com · Pune, Maharashtra · github.com/SidK2003

PROFILE

Final-year AI & Data Science undergraduate with hands-on experience building LLM-powered web applications and algorithmic trading systems. Shipped a production-ready AI product from concept to deployment. Passionate about applying machine learning to real-world problems in fintech and intelligent systems.

EDUCATION

BE — Artificial Intelligence & Data Science	2021 – 2025
Savitribai Phule Pune University	
HSC — Maharashtra Board	2021 · 90.1%
SSC — Maharashtra Board	2019 · 85.6%

PROJECTS

Crux — AI Research Discovery Platform

Sole Developer · crux-xi.vercel.app

- Built a full-stack web app that fetches research papers from ArXiv daily and serves LLM-summarized cards in a personalized feed — think Inshorts, but for academic research.
- Designed and implemented the AI pipeline: paper ingestion → Gemini API summarization → structured card generation with plain-English hooks and crux paragraphs.
- Engineered FastAPI backend with Supabase (PostgreSQL) for data persistence; built React + Node.js frontend with expandable card UI and share functionality.
- Shipped MVP end-to-end as sole developer — from architecture design to production deployment.

Stack: Python · FastAPI · Google Gemini API · Supabase · React · Node.js · Git

RAG-based Financial Document Q&A; System

Sole Developer · github.com/SidK2003/RAG-for-documents

- Built an end-to-end Retrieval-Augmented Generation (RAG) pipeline to answer plain-English questions over financial PDFs such as annual reports and RBI circulars.
- Implemented PDF parsing (pdfplumber), overlapping text chunking, semantic embedding (sentence-transformers: all-MiniLM-L6-v2), and vector storage (ChromaDB) from scratch.
- Integrated Google Gemini API for grounded answer generation — every response cites the source page number, eliminating hallucination.
- Tested on real NSE-listed company annual reports; pipeline processes 200+ page documents and returns cited answers in under 30 seconds.

Stack: Python · pdfplumber · sentence-transformers · ChromaDB · Google Gemini API · Git

Algorithmic Trading Bot — Market Sentiment Analysis

Sole Developer · Quant Finance

- Built a sentiment-driven trading strategy by fetching real-time financial news via Alpaca API and generating sentiment scores using the FinBERT NLP model from Hugging Face.
- Integrated sentiment signals with a backtesting engine to evaluate alpha generation against benchmark returns.
- Deployed strategy in a paper trading framework to monitor live signal quality and execution behaviour.

Stack: Python · FinBERT (Hugging Face) · Alpaca API · NLTK · Pandas · Backtesting.lib

SKILLS

Languages	Python
ML / DL	TensorFlow-GPU, PyTorch, Scikit-learn, NLTK
LLM / AI	Google Gemini API, RAG, FinBERT, Hugging Face Transformers, LangChain
Vector DBs	ChromaDB, sentence-transformers
Backend / Web	FastAPI, Node.js, React
Data	Pandas, Supabase (PostgreSQL), NSElib, Backtesting.lib

Tools

Git / GitHub, Vercel

Finance

Quantitative Finance, Financial Engineering, Algorithmic Trading

INTERESTS

Algorithmic Trading · Stock & Forex Markets · Building AI-powered Products · Meditation · Football
